

Stop prescribing records being sent to My Health Record

Note:

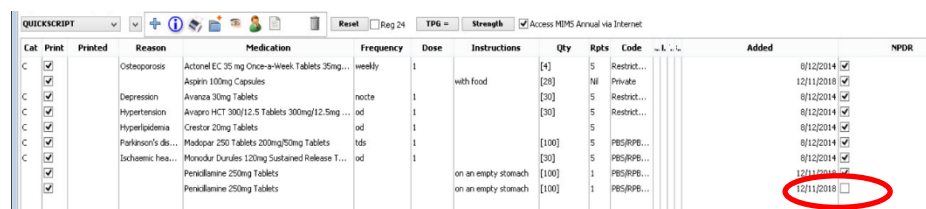

Genie uses the National Prescription and Dispense Repository (NPDR) to create and maintain medication histories for patients who have a My Health Record. By default, organisations using electronic prescribing, prescription documents will **Send to My Health Record** by default.

Adding to the NPDR

1. Click on the blue plus icon  above the prescription list and add the prescription(s) as normal. (Prescriptions can also be added from within the Consult Window using the **Add Script** button)

2. Untick the checkbox in the *NPDR* column beside the prescriptions, if the patient wants any prescriptions omitted from their My Health Record

3. Click the Printer icon  to print the prescription(s).
